Q. Does MTS Allstream require modems on its network to be CS-03 certified?

- A. MTS Allstream requires the modems to conform to Industry Canada's CS-03 specification, as per MTS Allstream Special Services and Facilities Tariff (CRTC 24002) Item 5830, section 4.I, which states:

It is the responsibility of the HSSP[high-speed service provider] and/or end-user to provide the customer premises equipment (CPE) device, filters, wiring, and/or splitters, which are beyond MTS Allstream's Customer Network Interface or demarcation point. The HSSP is responsible to ensure the end-user's CPE equipment and devices conform to Industry Canada terminal attachment standards, and meet all CSA and other applicable government safety standards. CPE must support the ITU G.993.2 VDSL2 standard to be compatible with the MTS Allstream network.

MTS Allstream does not do CS-03 certification.
